

Student Enrollment & Course Management System (SECMS)

User Story

- The Student Enrollment & Course Management System (SECMS) is a Salesforce-based application developed to simplify the process of student registration, course selection, enrollment tracking, and academic administration.
- The system provides a centralized platform where students, enrollment staff, instructors, and administrators can manage academic information efficiently.
- It helps reduce manual work, avoid duplicate records, improve communication, and provide better visibility into enrollment activities.

Student Enrollment & Course Management System (SECMS)

User Story

The **Student Enrollment & Course Management System (SECMS)** is a **Salesforce-based** application developed to simplify the process of student registration, course selection, enrollment tracking, and academic administration.

The system provides a **centralized platform** where students, enrollment staff, instructors, and administrators can manage academic information efficiently.

It helps **reduce manual work**, **avoid duplicate records**, **improve communication**, and provide **better visibility** into enrollment activities.

INTRODUCTION

1.1 Project Overview

The Student Enrollment & Course Management System is designed to bring student, course, and enrollment information together in a single Salesforce environment. The system supports important activities such as student registration, course availability, enrollment processing, instructor allocation, payment tracking, and approval management.

By using Salesforce features such as Flows, Validation Rules, Approval Processes, Reports, and Dashboards, the system can automate repetitive

tasks and maintain accurate academic records. Administrators can monitor enrollment activities, while enrollment officers can process student registrations and course requests more efficiently.

1.2 Purpose

-

The main purpose of SECMS is to and automated as olution for managing student enrollment and courserelated activities.

The system aims to provide:

-

Easy management of student information
Organized course registration

-

-

- Faster enrollment processing Proper instructor assingment.

-

- Automated approval and validation Secure maintenance of academic records

-

- Real-time reports and dashboards Better coordination between students and staff.

2.IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Enrollment Officer	manage student enrollments efficiently	enrollment data is scattered	systems are manual and unintegrated	frustrated and error-prone
PS-2	Administrator	track enrollments and revenue	reporting is delayed	data is not centralized	uncertain in decision-ma king

2.1 Problem Statement (Student Enrollment and Course Management System)

2.1 Empathy Map Canvas

User Personal: Enrollment Officer Think & Feel

- Wants to complete registrations accurately
- Wants to avoid duplicate student records
- Feels concerned when enrollment information is incomplete

Hear • Students asking about course availability •
Instructors requesting enrollment information •
Administrators asking for enrollment reports

See

- Student registration details • Course lists and available seats • Pending enrollment requests

Say & Do

- Verifies student information • Processes enrollment requests • Communicates with students and instructor

Brainstorming & Idea Prioritization

Step 1 – Ideas

- Student Registration • Online Course Enrollment • Enrollment Tracking • Academic Management • Salesforce Enrollment • System

Step 2 – Grouping

- Manual: Paper forms, • Spreadsheets
- Automated: • Online registration, Course management • Cloud-Based: Salesforce SECMS

Step 3 – Prioritization Salesforce SECMS was selected to manage students, courses, enrollments, approvals, and reports in one platform

2. IDEATION PHASE

2.2 Empathy Map Canvas

User Persona: Enrollment Officer

2.3 Brainstorming & Idea Prioritization

1 Step 1 – Brainstormed Ideas

- Spreadsheet automation
- Standalone enrollment portal
- ERP integration
- Salesforce-based enrollment system

2 Step 2 – Grouping

- Manual solutions
- Semi-automated solutions
- Fully automated cloud solutions

2.3 Brainstorming & Idea Prioritization – Student Enrollment & Course Management System (SECMS)

3. REQUIREMENT ANALYSIS PHASE

Awareness & Registration–Student registration and awareness Course

Selection – Choosing the required course
Enrollment Request – Submitting
enrollment request Fee Payment – Paying
the course fees Approval – Request approval
process Instructor Assignment – Assigning
an instructor to the student

-
-
-
-

Functional Requirements

FR-1: Student Management – Manage student records.

FR-2: Course Management – Create and manage courses.

FR-3: Enrollment Processing – Request, approve, and reject enrollments.

FR-4: Instructor Assignment – Automatically assign instructors.

Non-Functional Requirements

NFR-1: Usability – The system should be simple, userfriendly, and easy to navigate.

NFR-2: Performance – The system should requests respond quickly and process efficiently.

NFR-3: Security – Student and course data should be protected from unauthorized access.

NFR-4: Reliability – The system should work consistently with minimal failures or downtime.

NFR-5: Scalability – The system should support an increasing number of students, courses, and instructors.

Data Flow Diagram

4.PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

Student Enrollment & Course Management System (SECMS)

Streamlined Enrollment | Centralized Data | Automated Processes | Better User Experience

4.2 Proposed Solution – Functional Requirements

- Parameter: Problem
- Description: Manual enrollment handling and time-consuming administrative processes.
- Parameter: Solution
- Description: Salesforce-based SECMS for managing students, courses, enrollments, payments, and approvals.

•

Parameter: Novelty

- Description: End-to-end automation of course student enrollment and the management process.
- Parameter: Social Impact

- Description: Improves student experience through faster processing and transparent enrollment.

4.3 Solution Architecture

5.PROJECT PLANNING AND SCHEDULING

5.1 Project Planning

- Agile Methodology – The project follows an Agile approach to support flexible development and continuous improvement.
- Epics → Stories → Story Points – Project requirements are divided into epics, user stories, and story points to estimate the effort required.
- Sprint-Based Execution – Development activities are completed in short sprints, with each sprint focusing on specific features and tasks.
- Velocity Calculation – Team velocity is measured based on completed story points and

used to estimate the work that can be completed in upcoming sprints.

- Progress Tracking – Sprint reviews and regular updates are used to monitor project progress and identify pending tasks.

6. Project Development

Phase: Project Flow:

- Milestone 1: SalesforceDeveloper Account Creation
- Milestone 2: Custom Object Creation (Student, Course, Enrollment, Instructor) Milestone3: Tabs Creation.
- Milestone 4: Lightning App Creation
- Milestone 5: Fields Creation
- Milestone 6: Create Relationships v
- Milestone 7: PageLayout Customization
- Milestone 8: Validation Rules
- Milestone 9: Flows (Automation)
- Milestone 10: Approval Process
- Milestone 11: Reports
- Milestone 12: Dashboards
- Milestone 13: Security Setup
- Milestone 14: Conclusion

Milestone 1 – Salesforce Introduction Introduction:

Salesforce is a cloud-based platform used to manage business processes, customer information, and organizational activities. It provides various tools that help organizations store data, automate tasks, and improve overall productivity.

In this milestone, we learn the basic concepts of Salesforce, its main features, and how the platform can be used to build and manage applications.

We also explore important Salesforce components such as Objects, Records, Fields, Automation, Reports, and Dashboards. This milestone provides a strong foundation for using Salesforce in the Student Enrollment & Course Management System (SECMS).

What Is Salesforce?

Salesforce helps is a cloud-based CRM platform that

organizations manage their data, processes, and interactions in one place. It provides tools for storing information, automating tasks, tracking activities, and generating reports.

Salesforce allows users to access their work from anywhere through the cloud. It also supports data management, workflow automation, dashboards, and secure information storage.

For the SECMS project, Salesforce can be used to manage student details, courses, enrollment requests, instructor assignments, approvals, and reports efficiently.

Activity 1: Creating Developer Account:

Creating a developer org in salesforce.

Go to

On the sign up form, enter the following details

First Name: [Your First Name]

Last Name: [Your Last Name]

Email: [Your Email ID]

Role: Developer

Company : CollegeName

County : India

Postal Code : pin code Username :

Click on sign me up after filling these.

Activity 2:

Account Activation:

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10 mins.

2. Click on Verify Account

3. Give a password and answer a security question and click on change password.
4. Then you will redirect to your salesforce setup page.

To create the the student custom object:

- Go to Setup in Salesforce.
- Click on Object Manager.

Click
Create →
Custom
Object.

Enter the details as below:

- Label → Student
- Plural Label → Students
- Object Name → Student
- Record Name → Student Name
- Data Type → Text
- Optional Features → Select Allow Reports, Allow Activities.
- Search Status → Select Allow Search
- Click Save

- Track Field History (optional, if you want)

when referenced via the API: Record Name Example: Account Name

Data Type Warning: If you plan to insert a high volume of records in this object, via the API for example, use the Text data type.

Optional Features

- ☒ Allow Reports
- ☒ Allow Activities
- ☒ Track Field History
- ☐ Allow in Chatter Groups
- ☐ Enable Licensing

Object Classification

When these settings are enabled, this object is classified as an Enterprise Application object. When these settings are disabled, this object is classified as a Light Application object. [Learn more](#)

- ☒ Allow Sharing
- ☒ Allow Bulk API Access
- ☒ Allow Streaming API Access

Deployment Status [What is this?](#)

- And Select Allow Search
- Click Save button

Search Status

When this setting is enabled, your users can find records of this object type when they search. [Learn more](#)

☒ Allow Search

Object Creation Options (Available only when custom object is first created)

- ☐ Add Notes and Attachments related list to default page layout
- ☐ Launch New Custom Tab Wizard after saving this custom object

- Next, enter the details
- Label → Course
- Plural Label → Courses
- Object Name → Course
- Record Name → Course Name

Data Type → Text

- Optional Features → Select Allow Reports, Allow Activities Track Field History (optional)

Setup Home Object Manager

SETUP New Custom Object

3: Instructor Object Fields:

4: Enrollment Object Fields:

Milestone 4 – Create Relationships:

Activity 1: Create Lookup from Enrollment to Student:

- Steps:
- Go to Setup → Object Manager.
- Search Enrollment → open Enrollment__c object.
- Click Fields & Relationships → New. Select Lookup Relationship → Next.

- For Related To, select Student __c → click Next.
- Enter Field Label: Student (API Name: Student__c).
- Click Next through Field-Level Security and Layout options
- click save

Activity 2: Create Lookup from Enrollment to Course

Purpose: To link each Enrollment to a Course.

Steps:

- Go to Setup → Object Manager → Enrollment__c.
- Click Fields & Relationships → New.
- Select Lookup Relationship → Next.
- For Related To, select Course__c → Next.
- Enter Field Label = Course (API Name: Course__c).
- Click Next (set visibility and layout) → Save.

The screenshot shows the 'New Custom Field' wizard for the 'Enrollment' object. The left sidebar lists navigation options: Details, Fields & Relationships (selected), Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, and Search Layouts. The main content area is titled 'New Custom Field' and shows 'Step 1: Choose the field type'. Below this, it says 'Specify the type of information that the custom field will contain'. A table lists data types: 'None Selected', 'Auto Number', 'Formula', 'Roll-Up Summary', 'Lookup Relationship' (selected), and 'Master-Detail Relationship'. Each type has a brief description. The 'Lookup Relationship' description states: 'Creates a relationship that links this object to another object. The relationship field allows users to click on a lookup icon to select a value from a popup list. The other object is the source of the values in the list.' The 'Master-Detail Relationship' description states: 'Creates a special type of parent-child relationship between this object (the child, or "detail") and another object (the parent, or "master") where the relationship field is required on all detail records.'

The screenshot shows the 'New Relationship' wizard for the 'Enrollment' object. The left sidebar is the same as the previous screenshot. The main content area is titled 'New Relationship' and shows 'Step 2: Choose the related object'. Below this, it says 'Select the other object to which this object is related'. A dropdown menu labeled 'Related To' has 'Course' selected. Below the dropdown are 'Previous', 'Next', and 'Cancel' buttons. The bottom of the screen shows the 'Child Relationship Name' as 'Enrollments' and a checkbox for 'Required' which is unchecked.

Activity 3: Create Lookup from Enrollment to Instructor

- Go to Setup → Object Manager → Enrollment__c.
- Click Fields & Relationships → New.
- Choose Lookup Relationship → Next.

Enrollment
New Custom Field

Step 1. Choose the field type

Specify the type of information that the custom field will contain.

Data Type

☐ Name Selected Select one of the data types below

☐ Auto Number A system-generated sequence number that uses a display format you define. The number is automatically incremented for each new record.

☐ Formula A read-only field that derives its value from a formula expression you define. The formula field is updated when any of the source fields change.

☐ Roll-Up Summary (1) A read-only field that displays the sum, minimum, or maximum value of a field in a related list or the record count of all records listed in a related list.

☒ Lookup Relationship Creates a relationship that links this object to another object. The relationship field allows users to click on a lookup icon to select a value from source of the values in the list.

- For Related To, select Instructor__c → Next.
- Enter Field Label = Instructor (API Name: Instructor__c). Complete
- Field-Level Security and Page Layout options Click Save.

Step 3: Enter the label and name for the lookup field

Field Label: Instructor

Field Name: Instructor

Description:

Help Text:

Child Relationship Name: Enrollments

Required: ☐ Always require a value in this field in order to save a record.

Clear the value of this field. You can't choose this option if you make this field required.

Previous

Field Label	Data Type	Field Name	Description
Instructor	Lookup	Instructor	

Specify the title that the related list will have in all of the layouts associated with the parent.

Related List Label: Enrollments

Select the page layouts that should include this field. The field will be added as the last field in the first 2-column section of these page layouts. The field will not appear on any pages if you do not select a layout. To change the location of this field on the page, you will need to customize the page layout. To change the values that appear, you will need to customize the Record Types.

Add Related List	Page Layout Name
☒	Instructor Layout

☒ Append related list to users' existing personal customizations

Milestone 5 – Validation Rules:

Activity 1: Student Email Domain Validation

Steps:

- Go to Setup → Object Manager → Student __c.
- Click Validation Rules → New.
- Rule Name → Student_Email_Domain_Validation.
- Error Condition → Email must contain @student .edu.
- Error Message → Email must be a valid student institutional email.
- Error Location → Field → Email__c.
- Click Save.

Activity 2: Fees Must Be Paid Before Approval

Steps:

- Go to Setup → Object Manager → Enrollment__c.
 - Click Validation Rules → New.
 - Rule Name → Fees_Must_Be_Paid_Before_Approval. Error Condition →
 - Enrollment Status = Approved AND Fees Paid False.
 - Error Message → Fees must be paid before approving an enrollment.
 - Error Location → Top of Page (or field as needed).
- Click Save.

Milestone 6 – Approval Process

Activity1: CreateApprovalProcessforEnrollmentRequests

Steps:

- Go to Setup → Approval Processes.
- Select Enrollment__c object.
- Click Create New Approval Process → Use Standard Setup.
- Enter Process Name: Approval_Enrollment_Request.
- Set Entry Criteria: Enrollment_Status__c = "Requested". Save and
- configure approval steps (assign to Training Manager).

Milestone 8 - The Lightning App

Activity 1: Creating the Lightning Application for the Project

Steps:

- Go to Setup.
- In the Quick Find box, type App Manager.
- Click New Lightning App.
- Enter App Name: Student Enrollment & Course Management (Developer Name auto-fills, Description optional).
- Click Next → choose App Branding (optional logo/color theme).
- Select Navigation Style: Standard Navigation.
- Click Next → assign the app to profiles (Admin, Enrollment Officer, Instructor). Click Next →
- add tabs: Student
- Course
- Instructor
- Enrollment
- Reports
- Dashboards
- Home
- Tasks
- Click Next → review app settings. Click Save
- & Finish.
-

Milestone 9 – Page Layouts and Record: Activity 1: Create Record Types for Enrollment:

- Go to Setup → Object Manager → Enrollment__c.

-

Click Record Types → New.

-

For the first record type:

- Existing Record Type: Master
- Record Type Label: New Enrollment
- Enable for required profiles (Admin, Enrollment Officer)

• Select the default Page Layout → Save & New For the second record type:

- Record Type Label: Re-Enrollment
- Enable for same profiles
- Select the default Page Layout → Save

The screenshot shows the Salesforce Setup page for the Enrollment Object Manager. The page is titled "Enrollment" and has a sub-header "Enrollment". The left sidebar contains a navigation menu with the following items: Details, Fields & Relationships, Page Layouts, Lightning Record Types, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, Search Layouts, List View Button Layout, Restriction Rules, and Schema Rules. The "Record Types" item is currently selected. The main content area shows the "Enrollment Record Type" section with a "New Enrollment" record type. Below this, there is a section for "Enrollment Layout" with a dropdown menu set to "Enrollment Layout". The page also displays a table of profiles and their associated layouts.

Profile	Page Layout
Analytics Cloud Integration User	Enrollment Layout
Analytics Cloud Security User	Enrollment Layout
Account Integration	Enrollment Layout
Chatter External User	Enrollment Layout
Chatter Free User	Enrollment Layout
Chatter Moderator User	Enrollment Layout
Contract Manager	Enrollment Layout
Cross Org Data Proxy User	Enrollment Layout
Custom Marketing Profile	Enrollment Layout
Custom Sales Profile	Enrollment Layout
Custom Support Profile	Enrollment Layout
Enroll Agent User	Enrollment Layout
Enrollment Officer	Enrollment Layout
External Enroll Agent User	Enrollment Layout

Activity 2: Separate Page Layouts for Each Enrollment Record Type

Purpose: Show different fields for New Enrollment vs ReEnrollment.

Steps:

- Go to Setup → Object Manager → Enrollment__c → Page Layouts.
- Click New → create layout for New Enrollment.
- Clone from existing Enrollment Layout.
- Name = New Enrollment Layout → Save.
- Keep fields relevant for first-time enrollment:
- Student, Course, Instructor, Enrollment Date, Status, Fees, Comments. Remove unnecessary Re-Enrollment fields (if any). Click Save.

- Setup** > **Object Manager** > **Enrollment**

Steps:

Go to Setup → Object Manager → Student__c → Page Layouts.

In the palette, select Related Lists.

Drag Enrollments related list onto the layout. Customize columns if needed → Save.

- b) Course → Enrollment Related List
- Go to Object Manager → Course__c → Page Layouts.
- Open the layout.
- Add Enrollments related list. Click Save.
- c) Instructor → Enrollment Related List
- Go to Object Manager → Instructor__c → Page Layouts.
- Open the layout.
- Add Enrollments related list. Click Save.
-

• Student → Enrollment Related List:

Course → Enrollment Related List :

Instructor → Enrollment Related List :

Milestone 10 – Automation with Flow

Activity1: Auto-PopulateEnrollmentDate(RecordTriggered Flow)

Steps:

- Open Setup and navigate to Flows → click New Flow.
 - Choose Record-Triggered Flow and select Create.
 - Set the target object as Enrollment__c.
 - Configure the flow to run when a new Enrollment record is created.
- Select Actions and Related Records under optimization, then click Done.

Update Enrollment Date Automatically:

Add an Update Records element to the flow.

Set the element label as Set Enrollment Date.

Select the record that triggered the flow for updating.

Choose the field Enrollment_Date__c.

Set its value to \$Flow.CurrentDate.

This automatically stores the current date in the Enrollment Date field.

Save as SetEnrollmentDate → Activate.

- Create an Email Template and Email Alert to inform the student about approval.
- Go to Setup → Flows → New Flow.
- Select Record-Triggered Flow and choose Enrollment__c.
- Set the trigger to run when an enrollment record is updated.
- Add the condition Enrollment_Status__c = "Approved".
- Configure the flow to send the email notification, alert the Admin, and update the Student status to Active.

Add Get Records to fetch related Student__c.

Add Action (Email Alert) to send email to student.

Add Action to notify Admin if needed.

Add Update Records to set Student__c.Status__c = "Active".

Save as Enrollment Approved Action → Activate.

Activity 3: Auto-Assign Instructor Based on Course Category

- Rules:
- Technical → Instructor A
- Language → Instructor B
- Non-Technical → Instructor C

Steps:

- Prepare Instructor__c records with codes (e.g., INSTR_A, INSTR_B, INSTR_C).
- Go to Setup → Flows → New Flow → choose Record-Triggered Flow.
- Object = Enrollment__c, Trigger = Created or Updated.
- Add Get Records → fetch related Course__c (use Enrollment__c.Course__c).
- Add Decision element → check Course__r.Category__c.
- Outcome 1: Technical
- Outcome 2: Language Outcome 3:
- Non-Technical For each outcome:
- Add Get Records → fetch Instructor record (A/B/C) using code or name.
- Add Update Records → set Enrollment__c.Instructor__c = Get_Instructor_X.Id. Name Flow =
- AutoAssign_Instructor → Save & Activate.
-

Activity 4: Auto-Create Task for Follow-Up

Purpose: When Enrollment is “Requested”, create a follow-up task for Admin. Steps:

- Go to Setup → Flows → New Flow → choose Record-Triggered Flow.
- Object = Enrollment__c, Trigger = Created or Updated.
- Set Condition: Enrollment_Status__c = "Requested".

- Add Get Records → fetch Admin user (by Username or Profile).
- Add Formula Resource → TODAY() + 2 (for due date).
- Add Create Records → Task.
- Subject: Follow up on enrollment request
- OwnerId: Admin user Id
- WhatId: Enrollment Id
- ActivityDate: Formula (Today + 2)
- Name Flow = Create_Followup_Task → Save & Activate.

Milestone 11 – Reports:

Activity1: Create “Students by Status” Report

- Go to Reports → New Report.
- Select Report Type = Students.
- In Outline, group rows by Status__c.
- Add columns → Name, Email, Phone (and any others you need).
- Click Save → name it Students by Status.

Service Home Chatter Accounts Contacts Cases Reports Dashboards Instructors Courses Enrollments Students

Report: Students

Activity 3: Create “Pending Enrollment Approvals” Report

- Go to Reports → New Report.
- Select Report Type = Enrollments.
- Add Filter: Enrollment_Status__c = "Requested".
- Add columns → Student, Course, Owner, Created Date. Click Save →
- name it Pending Enrollment Approvals.

The screenshot shows the Salesforce Reports interface with the 'Pending Enrollment Approvals' report selected. The report displays a table with 3 records. The columns are: Enrollment: Enrollment Name, Student, Course, Enrollment: Owner Name, and Enrollment: Created Date.

	Enrollment: Enrollment Name	Student	Course	Enrollment: Owner Name	Enrollment: Created Date
1	Test Enrollment	-	Salesforce Admin Course	Ahla Tahseen k.s	9/23/2026
2	Total Revenue	-	Business English	Ahla Tahseen k.s	9/23/2026
3	Enrollment Approved - Student Notification	-	Project Management	Ahla Tahseen k.s	9/23/2026

Activity 4: Create "Revenue Report (Fees Paid)" Report

- Go to Reports → New Report.
- Select Report Type = Enrollments.
- Add Filter: Fees_Paid__c = TRUE.
- Group rows by Course__r.Name.
- Add Summary field → Course_Fee__c (or similar fee field).
- Click Save → name it Revenue Report – Fees Paid.

Milestone 12 – Dashboards:

Activity 1: Create "Student Management Dashboard" Steps:

- Go to Dashboards → New Dashboard.
- Name = Student Management Dashboard.

Select a folder → click Create.

Save inside the chosen Dashboard folder.

Add components:

Donut Chart → source = Students by Status report.

Bar Chart → source = Enrollments by Course report.

Gauge → source = Revenue Report – Fees Paid (sum of revenue field).

- Table → source = Pending Enrollment Approvals report. Click Save → Dashboard is ready.

4. Arrange components on canvas.

Milestone 13 – Security Setup

Activity 1: Configure Profiles

- Go to Setup → Profiles.
- Click New Profile (or Clone from existing).
- Create required profiles:
- Admin → Full access (all objects/permissions).
- Enrollment Officer → Create/Update Enrollments__c records.
- Instructor → Read-only access to assigned Enrollments__c.
- Enter Profile Name = Enrollment Officer.
- In Object Settings:
- Enrollment__c → Read, Create, Edit.
- Student__c → Read (add Edit if required).
- Course__c → Read (add Edit if required). Click Save.

- Go to Setup → Profiles → New (or Clone from existing).
- Enter Profile Name = Instructor. In
- Object Settings:
- Enrollment__c → Read-Only.
- (Optional) Student__c / Course__c → Read if you want Instructors to view related info.
- Click Save.

Activity 2: Create Permission Sets

- Go to Setup → Permission Sets → New.
- Create Custom Object Access → grant extra permissions for project-related custom objects (if needed).
- Create Dashboard Editor → enable Create/Customize Reports & Dashboards permissions.
- Assign each Permission Set to the relevant users (Admin, Enrollment Officer, Instructor, etc.).

Activity 3: Configure Sharing & OWD

- Go to Setup → Sharing Settings.
- Under Organization-Wide Defaults, set:
- Students (Student__c) → Public Read/Write
- Courses (Course__c) → Public Read/Write
- Enrollments (Enrollment__c) → Private Click Save.

For Instructor access to assigned Enrollments, optionally:

- On Enrollment__c, add a User Lookup field → label it Instructor User.
- Go to Setup → Flows → New Flow → choose Record-Triggered Flow.
- Object = Enrollment__c, Trigger = Created or Updated.
- Add Update Records element → set OwnerId = Enrollment__c.Instructor_User__c.
- Save Flow as Assign_Enrollment_Owner → Activate.

7. FUNCTIONAL & PERFORMANCE TESTING

During the functional and performance testing phase of the Student Enrollment & Course Management System (SECMS), screenshots were captured from the Salesforce user interface to validate that all implemented features worked correctly. These included the creation of student, course, instructor, and enrollment records, along with validation rule checks for mandatory fields, eligibility criteria, and enrollment constraints. Record type behavior was verified for different course categories, while flows were tested to confirm automated enrollment approvals and seat availability checks. Apex trigger functionality was also validated to ensure automatic confirmation and record updates. In addition, screenshots of generated reports and dashboards were documented to confirm accurate data visualization, enrollment tracking, and performance monitoring. All these screenshots serve as evidence of proper system functionality and efficiency during testing.

8. ADVANTAGES & DISADVANTAGES

Advantages

- Automation of enrollment approvals and seat checks.
- Validation rules ensure data accuracy and enforce constraints. Apex
- triggers handle automatic confirmations and updates.
- Reports and dashboards provide real-time insights.
- Role-based profiles and permission sets improve security.
- Saves time and reduces manual errors.
- Centralized management of students, courses, and enrollments.

Disadvantages

- Requires technical expertise for setup and maintenance.
- Complex flows/triggers may increase system overhead.
- Customization dependency on administrators.
- Private sharing settings may restrict visibility without extra rules.
- Performance issues possible with large datasets if reports aren't optimized.
- User training needed to understand profiles, permissions, and dashboards.
- Initial configuration effort can be high.

9. Conclusion:

The Salesforce Student Enrollment & Course Management System (SECMS) has proven to be an effective solution for streamlining the entire academic lifecycle. From student registration and course creation to enrollment management, instructor assignment, approvals, revenue tracking, and reporting, the system integrates all processes into a unified platform. By leveraging Salesforce's automation tools—such as validation rules, flows, approval processes, and dashboards—SECMS enhances data accuracy, operational efficiency, and informed decision-making. This project demonstrates how manual academic processes can be transformed into a scalable, reliable, and userfriendly digital solution, ultimately improving both administrative control and the student experience.

10. FUTURE SCOPE

- Integration with Learning Management Systems (LMS) for seamless course delivery.
- Implementation of AI-based analytics to predict student performance and enrollment trends.
- Mobile app development for student and instructor access on the go. Enhanced self-service portals for students to manage registrations, payments, and approvals.
- Expansion of automation flows for advanced approval hierarchies and notifications.

11. Appendix

- Screenshots of functional testing (record creation, validation rules, flows, triggers)
- Screenshots of performance testing (reports, dashboards, refresh times).
- Report definitions (Pending Enrollment Approvals, Revenue Report – Fees Paid Students by Status, Enrollments by Course).
- Dashboard configuration (Student Management Dashboard with Donut, Bar, Gauge Table components).
- Profile setups (Admin, Enrollment Officer, Instructor).
- Permission Sets (Custom Object Access, Dashboard Editor).
- Sharing Settings (Organization-Wide Defaults for Students, Courses, Enrollments)
- Flow design for Instructor assignment (OwnerId update via Instructor User lookup)
- Validation rules list (mandatory fields, fees paid before approval, eligibility checks)
- Approval process configuration for Enrollment requests.
- Object schema (Student, Course, Instructor, Enrollment objects with relationships).
